## PROFILE SUMMARY

Results-driven Data Analyst with over 6 years of experience delivering actionable insights through advanced analytics, dashboard development, and data infrastructure design in FinTech, supporting business growth and customer retention across diverse markets. Expert in SQL, Power BI, Python, and AWS, with a proven track record of building impactful reports and training analysts to drive data-driven decisions.

## EDUCATION

- |                                                                                     |      |
|-------------------------------------------------------------------------------------|------|
| • <b>M.Sc., Information Technology</b> – University of Lagos                        | 2023 |
| • <b>DATA SCIENCE ACCELERATOR</b> – Explore Data Science Academy                    | 2022 |
| • <b>Bachelor of Science, Computer Science</b> – Lagos State University, Ojo, Lagos | 2015 |

## TECHNICAL COMPETENCIES

- | Data Visualization                                                | Programming & ETL                                                                         | Other Tools                                                     |
|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| • Power BI (DAX, Power Query, M Language, Interactive Dashboards) | • SQL (Postgres, MySQL, Microsoft SQL Server, Window Functions, CTEs, Query Optimization) | • AWS (RDS, Redshift, S3, Cloud Practitioner certified)         |
| • Tableau, Graphana, Looker                                       | • Python (pandas, numpy, seaborn, sklearn, Streamlit, EDA, A/B Testing)                   | • dbt (Data transformation workflows)                           |
| • Jupyter Notebooks (Data visualization with Python)              | • Dataflows                                                                               | • Excel (Pivot Tables, VLOOKUP, VBA, Dashboards)                |
| • Seaborn                                                         |                                                                                           | • Git, Docker, Streamlit, JIRA (Sprints and Scrums), Confluence |

## SKILLS HIGHLIGHT

- |                            |                              |                           |
|----------------------------|------------------------------|---------------------------|
| • Leading Self & Others    | • Quantitative Reasoning     | • Stakeholder Management  |
| • Strategic Data Analysis  | • Communicating Upwards      | • Communicating Downwards |
| • Critical Thinking        | • Managing Complex Tasks     | • Proactive Ownership     |
| • Entrepreneurial Thinking | • Navigating Tech Ecosystems | • Requirements Gathering  |

## NOTABLE PROJECTS

- |                                                                                                                                                                                                                                                                                                                                           |          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>CONVERSATIONAL AI &amp; DATA PLATFORM</b> – Flutterwave                                                                                                                                                                                                                                                                                | JUL 2025 |
| • Built a custom conversational AI agent by collaborating with AI engineers, developing a robust data pipeline to consolidate report metadata/analytics as its knowledge base, engineering Slack integration for real-time queries and report access, and implementing automated data quality/governance checks to ensure data integrity. |          |
| <b>CUSTOMER CHURN PREDICTION MODEL</b> – Flutterwave                                                                                                                                                                                                                                                                                      | MAR 2025 |
| • Built an XGBoost-based churn prediction model using Python, SQL, and Power BI, analyzing over 500,000 transactions to identify at-risk customers and improve retention rates by 12%, while developing interactive Power BI dashboards to visualize churn scores and enable targeted retention strategies across African markets.        |          |
| <b>CUSTOMER HEALTH DASHBOARD</b> – Flutterwave                                                                                                                                                                                                                                                                                            | DEC 2025 |
| • Designed a Power BI dashboard incorporating weighted churn parameters to monitor over 100,000 customers, delivering actionable insights that reduced churn risk by 10%, while presenting findings to global stakeholders to align retention strategies across markets.                                                                  |          |

**PRICING APP – Work Related Project****OCT 2024**

- Developed a Streamlit-based Pricing App using Python, SQL, and Power BI to automate pricing analysis for over 50 merchants, saving 5 hours weekly, while creating dynamic visualizations to guide pricing decisions and increase revenue by 8%, and collaborating with data engineers to design scalable SQL tables for efficient data storage.

**DYNAMIC RISK RATING MODEL – Work Related Project****AUG 2022**

- Built a Python and SQL-based risk model to categorize over 1,000 merchants into risk levels, reducing fraud losses by 20%, while automating data extraction, transformation, and database updates to store merchant risk ratings in a dedicated table.

**WORK EXPERIENCE****Lead, Data & Insights – PESA****Dec 2025 – Present**

- Own end-to-end design, development, and maintenance of organizational dashboards and reporting systems, translating complex datasets into actionable insights to drive business and product decisions.
- Partner with Product, Growth/Marketing, Compliance, and Customer Solutions teams to define, measure, and report on KPIs, while leading deep-dive analyses on corridor performance, customer behavior, conversion funnels, and retention.
- Collaborate with engineering to improve ETL processes, warehouse design; support Compliance via data validation and anomaly detection; and drive experimentation frameworks including A/B testing and feature impact measurement.

**Senior Associate, Data Science & AI – Flutterwave Technology Solutions****July 2023 – Nov 2025**

- Developed real-time Power BI dashboards to monitor transaction success rates, improving performance by 15% through actionable insights across nine African markets.
- Authored complex SQL queries (CTEs, window functions) to generate global reports, reducing reporting time by 30% for cross-functional teams.
- Collaborated with data engineers to design AWS-based data warehouse structures (RDS, S3), optimizing data pipelines for scalability and reliability.
- Automated data workflows using Python and dbt, saving 10 hours weekly and enabling proactive KPI monitoring.
- Engaged with diverse stakeholders across Nigeria and global teams, delivering data-driven insights via storytelling presentations.
- Developed a company-wide NLP platform hosted on Slack, powered by an automated report workflow built with Python scripts to ensure the platform always accesses the most updated reports from across the company; automated information retrieval from knowledge bases using N8N workflows, streamlining access to critical data and enhancing the NLP platform's capabilities.

**Associate, Risk Data Analyst– Flutterwave Technology Solutions****Sept 2021 – July 2023**

- Built a Dynamic Risk Rating Model using Python, SQL, and Power BI, classifying 1,000+ merchants into risk categories, reducing fraud incidents by 20%.
- Designed interactive Power BI dashboards to track KPIs, enabling real-time issue identification for 20+ stakeholders.
- Automated SQL-based reports to flag suspicious transactions, improving detection efficiency by 25%.

**Relationship Manager/Analyst – First Bank (Customer Experience and Value Management)****May 2018 – Aug 2021**

- Designed Excel and Power BI sales dashboards to track customer transactions and analyze behavior, generating sales-qualified leads that increased revenue by 10% through targeted cross-selling and boosted wallet share in retail banking.
- Mentored over 15 team members on advanced Excel and data analysis techniques, streamlining workflows and enhancing team efficiency.

**CERTIFICATIONS**
